T.1	SRS 1.4.2.1.1. 1.4.2.1.6.	<p>Is it strongly required condition to integrate new system with Plixus?</p> <p>Do you use Televic Plixus as your main system or Televic Plixus is just part of new system or Customer plan to replace Televic Plixus network in comming time?</p> <p>a. Could you more describe request about integrating with existing Televic Plixus system? What is tech protocol we have to meet with our devices?</p>	<p>It is mandatory for the new system to be Plixus enabled.</p> <p>Televic Plixus is widely deployed in NATO. Staying with the same technology allows to reduce the amount of unique spares that have to be maintained. Also, the current AV Control systems that come as part of the NATO Wide Videoconferencing solution, and that are deployed throughout NATO, are already integrated with Televic Plixus Discussion Systems. Staying with the same or similar code-base greatly improves code maintainability for our Internal AV Support and reduces the need for additional Vendor Specific Training.</p>	<p>Closed Amendment 1</p>
